## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kato et al (2002/0149024) in view of Fujii et al (Jp 2000-031600).

The Kato et al reference teaches a method of growing a light emitting device, note entire reference. On a substrate, a first layer is grown; this layer is an n type nitride layer. On the n-type nitride layer, a multiple quantum well structure active layers are then grown. The layers are nitride-based semiconductors. There are also barrier layers grown with the MQW. A p type nitride semiconducting layer is then grown on the top of the structure, note examples. The sole difference between the instant claims and the prior art is the conditions of the p type layer growth. However, the Fujii et al reference teaches growing the p type layer in a non hydrogen atmosphere and at lower temperatures, note figures and abs. It would have been obvious to one of ordinary skill in the art to modify the Kato et al reference by the teachings of the Fujii et al reference to use lower temperatures and no hydrogen in order to not passivate the top layer increasing the operating temperatures.
